

Configure-to-Order Manufacturing

Enavate's Configure to Order Manufacturing solution, powered by Microsoft Dynamics 365 Business Central, is designed to elevate your CTO business. Our state-of-the-art ERP system, combined with advanced analytics and AI-driven insights, empowers you to make informed decisions, optimize resources, and boost efficiency. Deliver customized products on time, every time, and drive your business forward with unparalleled precision and performance.

Overcome common challenges with Enavate Configure-to-Order Manufacturing:

Confusion, mistakes, and delays in manufacturing due to lack of visibility into sales orders, engineering, production, and purchasing

Enavate Configure to Order Manufacturing starts with Business Central as a holistic ERP system ensuring end-to-end process integration through a centralized platform. This eliminates silos in manufacturing, inventory, procurement, and financial processes, providing real-time visibility into operations and fostering greater efficiency and collaboration.

Inaccurate demand forecasting and complex planning and scheduling causing delays, higher costs, and reduced productivity

AI-powered advanced reporting tools combined with Dynamics 365 Business Central's powerful planning and schedule tools analyze vast amounts of data quickly and efficiently. This allows operators to gain deeper insights, make data-driven decisions, and drive continuous operational improvement.

Configuration Complexities on Sales Orders Causing Costly Mistakes and Delays

Enavate's Configure to Order (CTO) solution simplifies the process of creating and managing product configurations, ensuring that all customization requests are accurately captured and processed. By automating the configuration process, it reduces the risk of errors and delays, leading to more efficient workflows and improved data accuracy.

Dissatisfied clients due to unpredictable delivery timelines

By leveraging Dynamics 365 Business Central, you utilize real-time data and demand forecasting to maintain optimal inventory levels. Collaborate with key suppliers based on the demand forecast to reduce lead times on raw materials. This ultimately helps in meeting customer demands promptly and improving client satisfaction.

CONNECTED CAPABILITIES TO ELEVATE MANUFACTURING OPERATIONS

Enavate Configure-to-Order Manufacturing is powered by Microsoft Dynamics 365 Business Central, ensuring a robust, reliable, and scalable ERP platform for your manufacturing needs.

Assembly Management

Capacity Planning

Version Management

Standard Cost Worksheet

Machine Centers

Subcontracting

Product Bill Of Materials

Production Orders

Finite Loading

Automatic Components and Capacity Consumption

Scrap

Our integration strategy with specialized CTO platforms transforms complex data landscapes into a streamlined, centralized hub. This real-time access to data powers significant improvements:

STREAMLINED OPERATIONS

Accelerate processes and reduce redundancies for quicker, more efficient workflows

OPTIMIZED RESOURCE UTILIZATION

Allocate resources more effectively, ensuring optimal use of equipment, personnel, and time

ENHANCED ORGANIZATIONAL EFFICIENCY

Elevate overall productivity through smarter, data-driven decision-making

ENAVATE MANUFACTURING EXPERTISE

At Enavate, we're more than just a software provider – we're a trusted partner of leading manufacturers, navigating the complexities of Configure-to-Order manufacturing and delivering results.

Proven Success with Manufacturing Clients

Trusted by leading manufacturers, showcasing our ability to deliver results. Our strategic partnerships and proprietary integration technology enhance efficiency and support.

Retention of Specialized Tools and Workflows

Seamlessly integrate without sacrificing the specialized tools and workflows essential to your operations.
